- Extension Hunt/Ring Groups - Simultaneous ring Extensions and Round Robin
- Call back, redial and missed calls available
- Call Parking
- Conference facilities (Phone Based)
- Directory Numbers for each Branch/Site
- Custom On-Hold Music
- Extension based dialing

Full Featured PABX in the Cloud

Voice Net Hosted PABX is a hosted IP-PBX that provides a business telephone solution suitable for SOHO and SME customers.

Voice Net Hosted PABX allows a fully functional IP-PBX to be deployed quickly over broadband connections, without the need to purchase in-house PABX systems or software. Voice Net Hosted PABX provides a scalable and flexible solution, removing the initial capital investment, and ongoing maintenance and support cost associated with traditional Customer Premises PABX systems.

Scalable Solution

Hosted Systems can start from as little as 4 handsets right through 200+ handset deployments. If the required number of extensions grows, Advance can be seamlessly upgraded to the next capacity option

Service Management

Voice Net Hosted PABX provides a web based management portal for each virtual PABX to manage features such as extension management, inbound route management and end user management.

Voice Net Hosted PABX will support a range of SIP compliant user terminals including IP phones, SIP Video phones, PC based soft phones and ATA devices with analogue handsets.
