User Features

- Delivery of invoice by email
- Web portal interface
- Online usage reporting
- Online invoice presentation

Hosted Billing Platform for Service Providers

Easybill is a hosted billing platform delivered through a web interface enabling business who sell internet or data services to customers the ability to re-bill service provision, carriage and ancillary services. The system is capable of providing billing for once-off, recurring and usage based services.

Businesses are provided with their own virtual billing platform (Realm) and web portal that allows product management, reporting and invoice presentation to end customers. Easybill accepts the raw customer usage data for voice and internet services, and provides the capability for businesses to self manage retail prices.

Businesses can also create their own products that can be billed.

Easybill provides your branded bills in PDF format, and a web interface to allow customers to view voice and data usage reports and invoices.
